ECB: REVIEWING STRATEGY WHILST WAITING FOR INFLATION

The ECB remains cautious in its assessment of the economic situation characterised by risks still tilted to the downside, although less than before thanks to the US-China trade deal. The message is slightly better on underlying inflation where some signs of a moderate increase are noted. Between now and year-end, the strategy review, which has now been launched, will grab a lot of attention, with markets wondering how it could influence monetary policy. The review is also important from the perspective of climate change: will monetary policy operations take it on board as a risk factor or will ambition even be higher?

Judging by the market reaction, the ECB President's press conference this week was rather uneventful. The Euro Stoxx 50 equity index fluctuated in a narrow range of approximately 0.15% and 10 year Bund yields eased about 1 basis point. The absence of volatility is unsurprising. Firstly, monetary policy is set to remain unchanged for a long time and, secondly, the message about the economy remains cautious. At the December meeting, the assessment was that "incoming economic data and survey information, while remaining weak overall, point to some stabilisation in the slowdown of economic growth in the euro area". Now "[i]ncoming economic data and survey information point to some stabilisation in euro area growth dynamics, with near-term growth expected to be similar to rates observed in previous quarters." The change in the assessment is tiny – "while remaining weak overall" has been dropped – but, importantly, no pick-up in growth is expected in the near term. Moreover, risks remain tilted to the downside although they have become less pronounced as trade-related uncertainty is receding. The Governing Council of course welcomes that "there are some signs of a moderate increase in underlying inflation in line with expectations", although the inflation outlook remains subdued.

With monetary policy locked in a state-dependent forward guidance mode and data moving at a glacial pace, attention is shifting to the strategy review, which has now been formally launched. The scope is huge but in line with its importance. A key question is whether the mandate, whilst remaining narrow – i.e. achieving price stability – will be reformulated. One possibility would be to make it explicitly symmetric. This would require dropping the word "below" in the now well-known sentence "We expect them to remain at their present or lower levels until we have seen the inflation outlook robustly converge to a level sufficiently close to, but below, 2%". Another possibility would be to set a range within which inflation would be considered in line with the objective. Clearly, such a move would have a significant impact on policy rate expectations and bring the expected first hike forward.

Then there is the question of how climate change should be addressed by the central bank. The sheer number of questions on climate change during the press conference is in part related to the ambition that has been expressed by the ECB's President in recent statements and before the European Parliament. They also reflect an impatience of seeing how far the remit will reach: risk control in the context of financial stability or something more ambitious in the context of monetary policy decisions by steering the relative pricing of financial assets – green versus other – or even influencing the flow of credit?

William De Vijlder

BUND & EUROSTOXX50 (INTRADAY)

SOURCE: BLOOMBERG, BNP PARIBAS

“The large number of climate-related questions during the press conference reflect an impatience of learning how far the ECB's remit might be broadened: risk control in the context of financial stability, steering the relative pricing of 'green' versus other assets or even influencing the flow of credit.

ECONOMIC PULSE

EUROZONE: FIRST SIGNS OF STABILISATION, BUT THERE IS STILL A LONG WAY TO GO

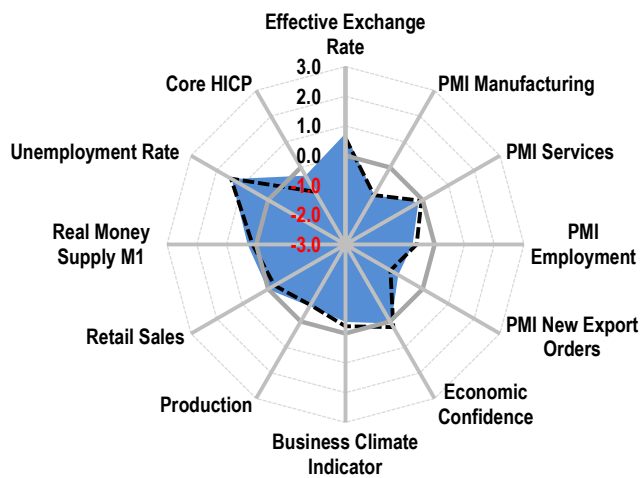

The most recent economic data in the Eurozone send an encouraging signal. The economic situation remains subdued, and particularly in the manufacturing and export sector, but a start of stabilisation can be expected. From the domestic side, the labour market is still resilient helping to support household consumption. The unemployment rate remains below its long term average and is still not rising despite the relatively lasting weakness of economic growth. Retail sales are better oriented and have converged to their long term average, thereby beating market expectations. The monetary development measured by the monetary aggregate M1 looks favourable, which bodes well for economic growth in the quarters ahead.

At the same time, the core inflation dynamics have been slightly more pronounced recently. A significant acceleration in prices seems however unlikely in the short term and the financing conditions within the eurozone should thus remain very accommodative. Turning to the external side, although many issues still need to be addressed, news is quite better than we expected a few months ago, and the general trend is towards stabilisation. For instance, the "new export orders" component of the PMI (Purchasing Managers Index) is still at a low level versus its long term average but displays a certain improvement..

QUARTERLY CHANGES

■ M3M (actual) - - - - M3M (4 months ago)

SOURCE: THOMSON REUTERS, BNP PARIBAS

SURPRISE (Z-SCORE)

SOURCE: BLOOMBERG, BNP PARIBAS

Note : the indicators in the radar and surprise charts are all transformed into z-scores. By construction, the z-scores have mean zero and their values, which indicate how far the indicator is removed from its long-term average, are in the interval between -3 and 3 in almost all cases. In the radar chart, the blue area shows the actual conditions of economic activity. It is compared with the situation four months earlier (dotted-line). An expansion of the blue area signals an improvement. In the right pane, the surprise is an actual outcome that differs from the market forecast (Bloomberg).

ECONOMIC SCENARIO

6

UNITED STATES

- Despite the support coming from the Fed rate cuts in 2019, we expect growth to slow in the near term under the influence of corporate investment (slower profits growth). However, trade uncertainty has abated and housing is picking up. Consumer spending should be more resilient but could slow on the back of a less dynamic labour market. All in all, this paves the way for somewhat better growth next year. As a consequence, we expect the Fed to keep its policy rate unchanged this year.

CHINA

- Economic growth continues to slow. Industrial activity and exports have been hard hit by US tariff hikes. Domestic demand has also decelerated.
- The central bank is easing liquidity and credit conditions, but the reduction in financial-instability risks should remain a priority and banks are prudent. Fiscal policy is expansionary through increased investment in infrastructure projects and household/corporate tax cuts. Tax measures are expected to have some success in supporting consumer spending.
- Consumer price inflation has accelerated due to rising food prices (soaring pork prices), but core inflation remains subdued.

EUROZONE

- The economic slowdown is continuing in the eurozone, especially in Germany, due to the international environment and difficulties in the manufacturing sector. The recent stabilization of business surveys, albeit at a low level as far as the manufacturing sector is concerned, provides some hope but needs to be confirmed.
- Inflation is now expected to decrease while core CPI is hardly moving. The activity slowdown also implies that the pick-up in core inflation could be slower than expected until recently.
- The very accommodative monetary policy should be maintained as long as inflation hasn't converged sufficiently, in a convincing and lasting way, towards the ECB's objective.

FRANCE

- Growth is slowing although the economy shows resilience. Households' consumption should get a boost from the tax cuts and the jobs recovery. Business investment dynamics remain favourable. The global backdrop is less supportive.
- A slight rise in core inflation is appearing but remains to be confirmed.

INTEREST RATES AND FX RATES

- In the US, we expect the Fed to maintain the official rate at its current level this year. The prospect of some pick-up in growth should lead to a gradual increase in Treasury yields.
- In the eurozone, the ECB's state-dependent forward guidance and the sluggishness of the inflation process imply that the very accommodative environment will remain in place for a long time. The movement of bond yields will be very much influenced by what happens to US yields, although we expect the increase in Bund yields to be smaller.

Sovereign spreads in the eurozone should decline.

- We expect that the Bank of Japan will refrain from further monetary easing.
- We expect little change in EUR/USD even though euro's fair value is quite higher than current pricing.

LATEST INDICATORS

This week's data, on the whole, show some improvement. In Germany, the ZEW indicator, which is based on a large survey amongst financial professionals, has increased significantly. Importantly, the composite flash purchasing manager index was up strongly in Japan and also rose in Germany, where manufacturing sentiment is improving and the services index is back at 54,2. In France on the other hand, the composite index eased on the back of weaker services data. Earlier this week, business confidence had also declined somewhat. Diverging developments in Germany and France meant that the eurozone composite index remained flat. Noteworthy is the (small) decline in the US of the Conference Board index of leading indicators. The Bank of Japan kept its policy unchanged but revised upwards its growth projections against a background of fiscal stimulus. No change in the ECB policy and message. The ECB survey of professional forecasters was largely unrevised.

COMING INDICATORS

Next week will be very busy with monetary policy meetings at the Federal Reserve and the Bank of England and a large number of important releases: GDP growth for Q4 2019 in the US, France and the eurozone, confidence data of the European Commission for the eurozone, IFO business climate in Germany, Conference Board and University of Michigan expectations in the US, consumer confidence in the UK. Finally, in China, we will also have the PMIs.

The information and opinions contained in this report have been obtained from, or are based on, public sources believed to be reliable, but no representation or warranty, express or implied, is made that such information is accurate, complete or up to date and it should not be relied upon as such. This report does not constitute an offer or solicitation to buy or sell any securities or other investment. It does not constitute investment advice, nor financial research or analysis. Information and opinions contained in the report are not to be relied upon as authoritative or taken in substitution for the exercise of judgement by any recipient; they are subject to change without notice and not intended to provide the sole basis of any evaluation of the instruments discussed herein. Any reference to past performance should not be taken as an indication of future performance. To the fullest extent permitted by law, no BNP Paribas group company accepts any liability whatsoever (including in negligence) for any direct or consequential loss arising from any use of or reliance on material contained in this report. All estimates and opinions included in this report are made as of the date of this report. Unless otherwise indicated in this report there is no intention to update this report. BNP Paribas SA and its affiliates (collectively "BNP Paribas") may make a market in, or may, as principal or agent, buy or sell securities of any issuer or person mentioned in this report or derivatives thereon. BNP Paribas may have a financial interest in any issuer or person mentioned in this report, including a long or short position in their securities and/or options, futures or other derivative instruments based thereon. Prices, yields and other similar information included in this report are included for information purposes. Numerous factors will affect market pricing and there is no certainty that transactions could be executed at these prices. BNP Paribas, including its officers and employees may serve or have served as an officer, director or in an advisory capacity for any person mentioned in this report. BNP Paribas may, from time to time, solicit, perform or have performed investment banking, underwriting or other services (including acting as adviser, manager, underwriter or lender) within the last 12 months for any person referred to in this report. BNP Paribas may be a party to an agreement with any person relating to the production of this report. BNP Paribas, may to the extent permitted by law, have acted upon or used the information contained herein, or the research or analysis on which it was based, before its publication. BNP Paribas may receive or intend to seek compensation for investment banking services in the next three months from or in relation to any person mentioned in this report. Any person mentioned in this report may have been provided with sections of this report prior to its publication in order to verify its factual accuracy.

BNP Paribas is incorporated in France with limited liability. Registered Office 16 Boulevard des Italiens, 75009 Paris. This report was produced by a BNP Paribas group company. This report is for the use of intended recipients and may not be reproduced (in whole or in part) or delivered or transmitted to any other person without the prior written consent of BNP Paribas. By accepting this document you agree to be bound by the foregoing limitations.

Certain countries within the European Economic Area:
